Tubifera ferruginosa .....	148	Zehring, W. A. ....	40
Tucker, W. M. ....	221		

## NOTICE TO AUTHORS.

### *How to prepare standard manuscript.*

1. Typewrite the manuscript on white paper of uniform size ( $8\frac{1}{2}\times 11$ ); write only on one side and leave a margin of about  $1\frac{1}{4}$  inches all around; double space between the lines.

2. In typewriting the text put the footnote numbers exactly where each reference belongs.

3. Typewrite all footnotes together and number them consecutively from 1 up. Explanations of figures should be treated in the same way, and like footnotes should be put at the end of the text copy.

4. When a table is reached in the text, stop. Remove the sheet. Take a new sheet of paper and typewrite the table. Then proceed with the text, on a new sheet, until the next table is reached when the same procedure should be repeated.

5. Number every sheet consecutively throughout.

6. Mark on the copy in ink the place where each illustration is to be placed.

7. Write at the top of the first page of copy, for the running page headline, a shortened title of not over 35 letters if the main title is longer.

8. Figures should be numbered from 1 up, including all figures in text or plates.

9. Draw all figures so they can be reproduced as line or half-tone engravings. In grouping the drawings bear in mind, that after the reduction has been made, the figures should not exceed the dimensions of the printed matter on the page,  $4\frac{1}{2}\times 7$  inches. Arrange the figures and lettering so as to make a neat appearance when printed.

The editor reserves the right to return manuscripts not prepared according to these suggestions.
