

THE NEW SCIENCE LABORATORY AT MOORES HILL COLLEGE.

BY A. J. BIGNEY.

At the last meeting of the Board of Trustees of Moores Hill College, in June, 1904, they made additional provision for the Science Department by purchasing a large three-story brick building in the town which had been used as a business house. This building is very well adapted to its new purposes. Most of the internal changes have been made and the building occupied except the third story. It is forty-five feet front and seventy feet deep, and three stories high, with a full basement. The basement is used as a furnace room, shop, store-room, and photographic room.

The first floor contains a scientific library, a private room for the instructor, a combined biological laboratory and recitation room, a combined museum and geological laboratory, and one room occupied by the Y. M. C. A. and Y. W. C. A.

The second floor is occupied by the Philoneikean Society as chapter rooms. When the college needs these rooms the Society will vacate them.

The third floor will be occupied by the chemical and physical departments.

The scientific departments now have plenty of room for increasing their efficiency. The museum is growing very rapidly and this building will make it much more serviceable. No movement has been started in recent years that will prove as helpful not only for the college but also for the scientific interests of southeastern Indiana.
