

THE UREDINALES OF INDIANA.

BY H. S. JACKSON.

The first authentic record of the collection of any species of plant rust in Indiana of which we have any knowledge was made by Dr. J. M. Coulter in the Botanical Bulletin (Botanical Gazette) 1:20, 1876. In a short article he noted the common occurrence of *Uromyces lespedezae* Schw. on *Lespedeza violacea*, presumably in the vicinity of Hanover.

The first account of the rusts of the State presented before the Indiana Academy of Science was included in a paper by E. M. Fisher on the Parasitic Fungi of Indiana, which was read at the annual meeting for 1890. This paper listed a considerable number of species of Uredineae, but unfortunately was not published and is unavailable. The specimens on which the paper was based were deposited in the herbarium of the United States Department of Agriculture. A list of the species was, however, obtained by Dr. L. M. Underwood and included in his "List of the Cryptogams at present known to inhabit the State of Indiana," which was printed in the Proceedings for 1893.

The latter list forms the basis of our knowledge of the cryptogamic flora of the State and enumerates 88 species of Uredinales including the unattached aecial and uredinial forms. Supplementary lists by various authors have appeared in the Proceedings from time to time since that date, only the most noteworthy of which need be mentioned.

In 1896 Miss Lillian Snyder presented a list of the rusts of Tippecanoe county, supplementing the work in 1898 with lists from Madison and Noble counties. The rusts of Hamilton and Marion counties were listed by G. W. Wilson in 1905.

Two complete State lists have been presented to the Academy by Dr. J. C. Arthur. The first was read in 1898 and enumerated 80 species; the second was presented in 1903 and included 105 species. Both these lists were prepared in such form as to illustrate the latest developments in revised nomenclature. The unattached aecial and uredinial forms were omitted.

The present list is based on the information contained in all the preceding ones which have appeared in the Proceedings of the Academy, together with the wealth of material collected in all parts of the State contained in the

Arthur herbarium at the Purdue Experiment Station. An attempt has been made to show the distribution within the State by counties. Under each host is given a list of the counties within which the species has been collected, together with the name of the person making the *first* collection and the year in which the collection was made. A considerable number of the collections which have been recorded in the first lists were not available to the writer. These have been included in the distribution only when there seemed to be no chance of mistaking their identity. A few species evidently wrongly determined of which no specimens were available, have been omitted.

The nomenclature followed is that of Dr. J. C. Arthur as used in the N. Am. Flora, volume 7, in so far as that admirable work has been completed, or as proposed for the unpublished portion. The nomenclature of the hosts in general conform to that of Britton & Brown, Illustrated Flora, 2nd edition.

For convenience in consulting the list, the species not previously recorded are marked *. Hosts not previously recorded are printed in black-faced type. References are inserted following the host name to the year and page of preceding volumes of the Proceedings, where additional information may be obtained. Wherever Indiana rusts have appeared in published sets of *exsiccati* reference is made following the collector's name. Reference by number is made to the rusts included in the set of Parasitic Fungi distributed by the Indiana Biological Survey, December, 1894. Series 1. (See Proceedings 1894:154-156. 1895.)

It is the plan of the writer to submit additions and corrections to this list as material is collected. It would be greatly appreciated if collectors would send duplicates of their collections to the writer.

The writer wishes to acknowledge his indebtedness to Dr. J. C. Arthur for the unrestricted use of his herbarium and notes in the preparation of this list without which any approach to completeness would have been impossible. Dr. Arthur has also kindly read the manuscript and offered many helpful suggestions.
